

Hepatitis B Community-Based Screening Guide

The Centers for Disease Control and Prevention recommends hepatitis B screening for all adults 18 and older in the U.S. Testing and linkage to care can prevent the spread of infection, and help prevent cirrhosis and liver cancer.

Hepatitis B Screening

- Hepatitis B is a leading cause of liver cancer.
- Most people don't know they are infected.
- There are good treatments available for hepatitis B.
- Diagnosing hepatitis B is the first step towards preventing liver cancer.
- A simple blood test can save a life!
- All adults in the U.S. should be tested for hepatitis B.

Hepatitis B Screening Tests

Hepatitis B Surface Antigen (HBsAg) Test

Test for the presence of the virus

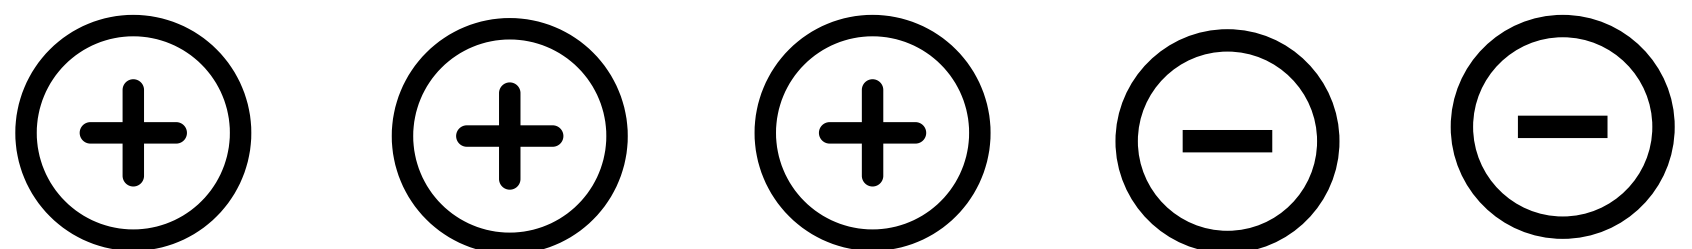

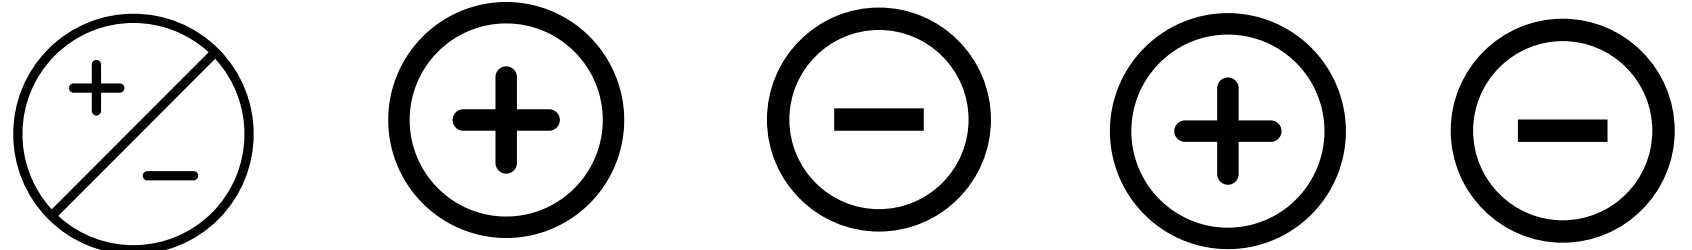

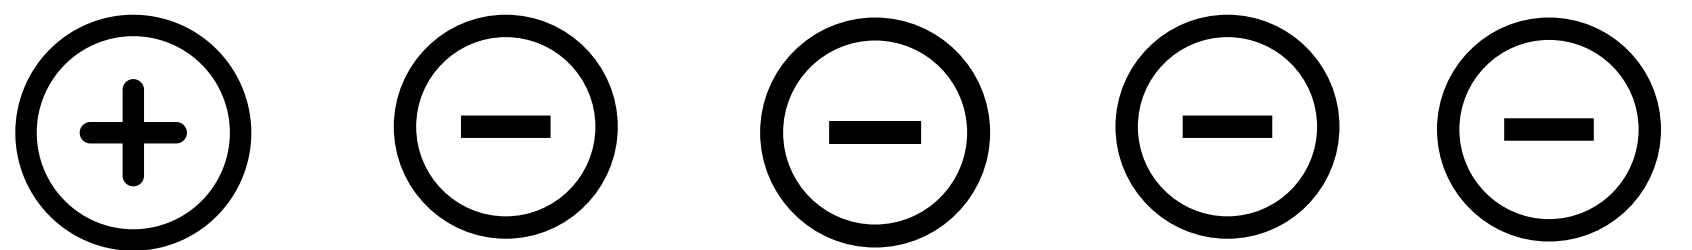

Hepatitis B Surface Antibody (anti-HBs) Test

Test for the presence of antibody

Hepatitis B Core Antibody (anti-HBc) Test

Test for past or present infection

Test Results

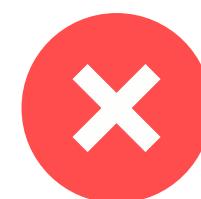

Current infection

Prior infection with immune control

Prior infection with immune control

Immune

Susceptible to infection

Interpretation

Vaccinate?

Call to Action

Provide primary care referral for further testing

Watch for reactivation if becomes immune suppressed

Watch for reactivation if becomes immune suppressed

Protected for life, so no further action

Provide referral as needed

How to Start a Screening Event in Your Community

1. **Establish a partnership with a local health provider (preferably a physician)** who can work with you to establish a standing order for your screening

2. **Establish a lab partner** to run diagnostics

a. *Highly recommend Quest and Labcorps as starting points*

3. **Establish linkage to care sites**

a. *Consider language preferences for your target communities*

b. *Consider the locations and travel accessibility of communities*

c. *Have a safety net clinic for individuals without insurance or who are underinsured*

Find an FQHC in your area that can provide comprehensive health care

<https://findahealthcenter.hrsa.gov>

d. *Establish relationships with health care institutions*

4. **Identify community partners** that can host screening events

a. *Churches, refugee resettlement organizations, shelters, syringe exchange sites, community centers*

b. *Tip: Asking if you could provide education or screening is a great first step **but remember**- trust is important and might take time to develop relationships*

5. **Schedule a screening event**

a. *Try to schedule evenings and weekends to accommodate for the working population*

6. **Host the screening event**

a. *Consider volunteers, especially multilingual partners, to help with translations*

b. *Utilize the CDC multilingual Know Hepatitis B Campaign materials and other Hepatitis B Foundation resources available for free online*

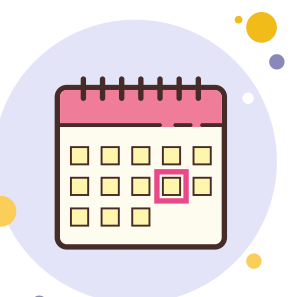

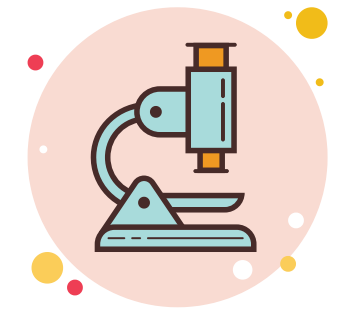

7. **Examine and interpret lab results**

8. **Mail results out to participants**

Be sure to explain test results in preferred language

a. *Contact any person infected with HBsAg and ask to help them get into care*

b. *If individuals need a vaccine, then you can set up vaccination clinics*

Things You Will Need During the Screening

1. Lab forms

a. *Quest and Labcorps are most commonly used*

2. Demographic information forms

3. Fact sheets/materials

4. Informed Consent

a. *Must have consent if you are collecting data*
