

KEY FACTS

KEY FACTS

Hepatitis B is a virus that can lead to liver disease or liver cancer over time.

Hepatitis B is one of the world's most common infections, and is more common in Asia and Africa.

Most people who have hepatitis B have not been tested, because they do not have symptoms. Many people are unknowingly infected.

Getting tested for hepatitis B is simple, and is the only way to know if you have hepatitis B.

By being aware of a hepatitis B infection, you can prevent liver disease by monitoring your liver health over time with a doctor

Where to get tested?

Your family doctor. Ask to get tested for hepatitis B at your next appointment.

Ask your local community organization if they can help locate a place for you to get tested. There are sometimes free hepatitis B screening events! Visit www.hepb.org for more information.

There are health clinics available that can see people for a lower cost or even free. They may be able to test you for hepatitis B. Visit to <https://findahealthcenter.hrsa.gov/> to locate a clinic near you.
